

Anastasia Lisovyk

AI Automation & Product Engineer

Kraków, Poland · Open to Remote / Relocation · a.lisovyk.v@gmail.com · alisovyk.com · linkedin.com/in/anastasia-lisovyk

PROFESSIONAL SUMMARY

Product and automation engineer with 6+ years turning early-stage ideas into working software for startups, venture studios and international clients. Track record spans technical validation of new startup ideas, rapid MVP/PoC builds, AI agent and workflow automation (OpenAI API, Claude API, n8n, Make), and full-cycle no-code/low-code product development (Bubble, WeWeb, Webflow, Supabase). Independently shipped three commercial mobile apps end-to-end — Psalmo, Bubbi and Sobeer — spanning faith-tech, health-tech and habit-tracking, including native iOS integrations, localization into up to 35 languages and full ASO/App Store pipelines, with one monetized within weeks of launch. Currently expanding into JavaScript/TypeScript, SQL/PostgreSQL and DevOps to deepen technical range alongside AI and automation work.

CORE EXPERTISE

Product Discovery & Validation · Technical Research · Rapid Prototyping & PoC · MVP Development · AI Agents & Automation (OpenAI, Claude, LangChain) · Workflow Automation (n8n, Make) · API & CRM Integration · No-Code/Low-Code Development · System & Database Design

PROFESSIONAL EXPERIENCE

Independent AI Automation & Product Engineer

Mar 2026 – Present

- Design and build AI agents and multi-agent systems (OpenAI API, Claude API, LangChain), automation pipelines (n8n, Make) and full-stack product rebuilds for business clients — see Selected Projects below.
- Independently researched, designed, developed, localized and launched three commercial mobile apps end-to-end — Psalmo (Bible-first screen-time app with native iOS Screen Time/WidgetKit integration, 5-language localization), Bubbi (baby heartbeat & pregnancy companion, ~32 locales, RevenueCat monetization) and Sobeer (habit-recovery tracker, 35 locales, Supabase + RevenueCat) — covering research, ASO, paywall funnels and legal/landing pages; one generated its first paying customers within weeks of launch with no marketing team.
- Run prompt engineering and iterative evaluation cycles to improve AI agent reliability and response quality.

R&D / Product Engineer — ICEO LTD.

Dec 2023 – Feb 2026

- Evaluated early-stage startup ideas pre-development inside an internal venture studio: market and competitor research, technical feasibility, cost/timeline estimation and no-code/low-code build recommendations.
- Built rapid prototypes and Proofs of Concept that let the studio validate or kill ideas before committing full development budget, working alongside Product Managers, Business Analysts, Researchers and Solution Architects.
- Built AI-powered internal automation (OpenAI integration) and delivered production landing pages/MVPs (Bubble, Webflow) across the studio's portfolio, including a fintech product (Linity) after the venture studio wound down.

Software Developer — Asumma Homes

Feb 2023 – Nov 2023

- Built the core internal platform for a sustainable home-construction company, connecting company admins, supplier/partner organizations and end clients in one workflow.
- Designed the tender system: admins issue material/work requests, invite qualified suppliers, and suppliers submit competing bids through the platform.
- Designed database schemas, built analytics dashboards and integrated third-party APIs, payment flows and webhooks.

Freelance Product Developer — Upwork

Feb 2022 – Feb 2023

- Delivered no-code products end-to-end (Bubble.io, Webflow, WeWeb, Airtable, Xano) for international clients, including a visa-application workflow platform and a peer-to-peer vehicle rental marketplace.
- Owned full project lifecycle — requirements, build, deploy, post-launch optimization — with direct client ownership from discovery to delivery.

Senior No-Code Developer — WeLoveNocode INC.

Apr 2021 – Jul 2022

- Delivered MVPs and production applications for international startups across fintech (automated price negotiation & renewal marketplace, team of 5, 8 weeks), on-demand services (Uber-style plumbing marketplace, team of 7, 3 months — helped the client reach their next investment round) and social/dating products.
- Shipped a volunteer-coordination platform for Ukraine in 3 days at the start of the full-scale invasion.
- Collaborated cross-functionally with design and engineering teams on architecture and performance.

Lead Generator — Regional Representative, Poland — KeenEthics

Jun 2020 – Dec 2022

- Managed the full sales funnel as regional representative for the Polish market; gathered client requirements and prepared BA documentation — early grounding in translating business needs into technical scope.

SELECTED PROJECTS — AI & AUTOMATION

Upwork Cover Letter Generator — NDA-aware portfolio matching · n8n · Claude API · Notion API · Telegram Bot API

Notion portfolio of 28+ cases with NDA/showcase visibility rules; the generator matches the 2–3 most relevant cases to a job posting and drafts a short cover letter with inline case links. Prep time per application dropped from 15–20 minutes to 10–15 seconds.

PM AI Assistant — voice-to-task via Telegram · n8n · Groq/Whisper · Claude API · Jira API · Google Calendar API

Voice or text messages are transcribed and classified by intent (task, meeting, reminder, status change), then routed automatically into Jira/Notion and Google Calendar, with a daily morning digest. Removes manual re-entry between meetings and the tracker.

Zbs.lviv.ua — B2B catalogue rebuild · Vanilla JS · htmx · Supabase · Netlify

Replaced a 2018 OpenCart storefront that did not match the client's manager-led wholesale model. Built a filterable catalogue (DN, connection type) on Supabase, an enquiry form instead of a cart, and a full self-service admin panel. ~30KB transfer; the client now manages the catalogue without a developer.

SELECTED PROJECTS — INDEPENDENT MOBILE PRODUCTS

Psalm — Bible-First Screen Time App · Expo · React Native · TypeScript · Family Controls/WidgetKit · Fastlane

Daily-verse app that pauses distracting apps via native iOS Screen Time / Family Controls until the user reads today's verse, with home/lock-screen widgets, full Bible text (KJV/WEB), AI prayer chat and a premium funnel. Built the native Screen Time, WidgetKit and DeviceActivity integrations; localized the UI into 5 languages; automated a fastlane screenshot pipeline (5 languages × iPhone + iPad); built the marketing landing page and legal pages.

Bubbi — Baby Heartbeat Monitor · React Native · TypeScript · RevenueCat · i18n (~32 locales)

Pregnancy-companion app for listening to, recording and sharing baby-heartbeat audio (BPM, waveform), plus a baby diary and week-by-week pregnancy journey. Ran competitive research to define positioning/pricing, rebranded from Bumpi to avoid a market name clash, localized into ~32 languages with ASO metadata for 5 markets, and shipped RevenueCat-based freemium monetization.

Sobeer — Days Clean / Habit Tracker · Expo Router · TypeScript · Zustand · Supabase · RevenueCat · i18n (35 locales)

Habit-recovery tracker (alcohol, nicotine, screen time) with streaks, money/time-recovered calculations, a craving/mood journal and community groups. Built local-first with Supabase-ready auth/community sync, localized into 35 languages, with Face ID gating and RevenueCat premium tiers.

TECHNICAL SKILLS

AI & Agentic Development: OpenAI API, Claude API, LangChain, Prompt Engineering, AI Agents, Agentic AI Development, Microsoft Copilot, MCP-aware tooling

Automation: n8n, Make (Integromat), Zapier, Webhooks, API Integration, CRM Integration

Product: Product Discovery, MVP/PoC Development, Technical Validation, Startup Research, Rapid Prototyping

Development: JavaScript/TypeScript, HTML, CSS/SCSS, Tailwind, SQL/NoSQL, PostgreSQL, MariaDB, MongoDB, Git

Mobile: React Native, Expo / Expo Router, Flutter (Riverpod, GoRouter), native iOS frameworks (Family Controls, ManagedSettings, WidgetKit, DeviceActivity), RevenueCat, Fastlane/ASO, i18n at scale (up to 35 locales), Zustand

No-Code/Low-Code: Bubble.io, WeWeb.io, Webflow, FlutterFlow, XANO, Supabase, Airtable, Firebase

Cloud & Infrastructure: AWS, Google Cloud, DigitalOcean, Netlify, Linux, Windows, macOS, UTM (virtualization)

Collaboration: Jira, Confluence, ClickUp, Bitbucket

AI-Assisted Dev Tools: Claude Code, Cursor, GitHub Copilot

Design: Figma, Responsive/UX Design

CERTIFICATIONS

- Database Fundamentals — SoftServe Academy, Jun 2026 (SQL, PostgreSQL, MongoDB, NoSQL data modeling)
- Modern Frontend Fundamentals with AI — SoftServe Academy, Mar 2026 (HTML/CSS/JS, React/Next.js intro, AI-assisted dev)
- JavaScript / TypeScript Fundamentals — SoftServe Academy, Feb 2026
- Claude Code in Action — Anthropic Academy, Apr 2026 (MCP servers, hooks, Claude Code SDK)
- Claude 101 — Anthropic Academy, Apr 2026
- Introduction to Claude Cowork — Anthropic Academy, Apr 2026
- n8n Certification — Level 1 & Level 2, 2025 (legacy certification; recertification planned on n8n's new platform)
- DevOps Fundamentals for Developers — SoftServe Academy, in progress (Docker, CI/CD, cloud, REST APIs)
- WeWeb — Official platform certification, 2022

EDUCATION

Finance and Controlling — Jagiellonian University, Oct 2018 - Jan 2020	Bachelor of Business — Andrzej Frycz Modrzewski Krakow University, Oct 2014 - Jan 2018
